**Part I – Teaching practices**

Princely erudition, universities and the Republic of Letters as instruments of networking: the Este, Dukes of Ferrara, Modena and Reggio, and the Holy Roman Empire
_Elena Taddei_ » 23

Organizing history: Gottfried Bessel (1672-1749) and his *Chronicon Gottwicense*
_Manuela Mayer_ » 39

The idea of encyclopaedia at the University of Trnava around 1700
_Svorad Zavarsky_ » 56

Some notes on the Northern European reception of Frans Titelmans’ *De consideratione dialectica* (1533)
_Christoph Geudens_ » 83

Logic in the web of sciences: a Louvain case study from the seventeenth century
_Steven Coesemans_ » 117
TABLE OF CONTENTS

Part II – Reforms

Contesting the universality of European academic degrees. The case of Nordic doctoral degrees during the long eighteenth century
*Mikkel Munthe Jensen* pag. 139

Paduan alumni and University reforms in Austria
*Vittoria Feola* » 162

The right way to practice natural history. Pehr Kalm: a Linnaean reformer of academic studies in Finland
*Cecilia af Forselles* » 176

Philippe Pinel’s portrayals according to nineteenth-century French and American pamphlets
*Giovanni Silvano* » 198

A source for the study of the University of Padua in the early nineteenth century: the Rectors’ annual reports
*Filiberto Agostini* » 215

A Project for a New Global History of the Padua Medical School from the Renaissance to the Enlightenment
*Giovanni Silvano* » 229

Reflections on the future
*Giovanni Silvano* » 239

Index » 245
Preface

Filiberto Agostini*

Early Modern Universities and the Sciences is the result of the fruitful collaboration between the University of Padua, its Departmental Center for the History of the University, and Scientiae, a vibrant scholarly community devoted to the study of knowledge production practices in the early modern era. The volume addresses issues of teaching and reforms at a number of early modern European Universities, about some of which not much has been done yet. Thus, our book makes a significant contribution to the history of Universities by beginning to fill those gaps, as well as by exploiting a wealth of primary sources that can rarely be found in traditional histories of the Academe. Indeed, the diversity and richness of its documentary apparatus is such that hard choices were necessary when dealing with their many languages. Readers will necessarily come from the international scholarly community; as such, I hope their attitude will be one of initial surprise and later understanding. Translating too much would have impaired the reading flow and would have caused the loss of meaning in an instance too many.

Early Modern Universities and the Sciences has the ambition to surprise readers for two main reasons.

First, it aims to provide an informative overview of teaching practices across early modern European Universities. In so doing, it challenges several previously accepted analyses, and supplies new perspectives on the increasingly blurred differences between logic teaching in Catholic and Protestant institutions. This should prompt further research about the substance behind confessional wars of words.

Secondly, it shows that reforms were just an important part of academic life in many European universities as teaching was. In other words, it looks as though university teaching and reforms were two sides of the same double-edged sword, that of the penetration of empirically-inclined methods into

university research. Another way to put this can be that Renaissance scholarship found in University teaching and reforms its avenue of influence on European and other societies. The history of the institutionalisation of knowledge is, therefore, of primary importance as far as the very identity of the West is concerned.

*Early Modern Universities and the Sciences* is a collection of essays that uses the history of the Universities to contribute to many different fields of learning, in a spirit quite akin to those Scientiae practitioners of the past, albeit it sternly looks to the future.
